

**CHRONICLE**  
is an EU-funded project  
that aims to improve  
building performance in  
order to increase energy  
efficiency, comfort and  
well-being.

**HUMANS  
HAVE NEEDS.  
BUILDINGS TOO.**

How do we know what our  
homes need, if they cannot talk?  
We give your home a voice by  
creating digital tools to  
understand the performance  
of your building.

[www.chronicle-project.eu](http://www.chronicle-project.eu)

### Who are we?

The **CHRONICLE** project is a collaboration between 18 partners in 9 countries across the EU. We are a group of companies, NGOs, universities and associations that work with technological development, innovation and housing-related fields.

### What is our goal?

Together, we strive to find ways to best reduce energy usage and carbon emissions during the whole life cycle of a building. We want to improve building performance in order to meet sustainability targets, and to make residents more comfortable at home.

### What do we plan to do?

We will develop digital tools to measure and improve the building performance. These smart devices will help to monitor the indoor climate and the energy consumption to develop more sustainable, cost-effective, long-term maintenance and renovation plans.

We will test the digital tools at pilot sites in:

#### Denmark

Herring Social Housing

#### Greece

Apostrophe Settlement

#### Ireland

Custom Affordable Homes

#### Switzerland

La Seda Retirement Home

#### Spain

Eco Home Social Housing

We create smart buildings for ordinary users, so that your home uses the right amount of energy. This will be better for your budget and for our planet.

### What are the benefits of this project for your home?

- There will be an overview of your energy consumption and performance through a user-friendly app, along with tips on how to reduce energy waste and save money.
- With the digital tools, building managers will be able to assess the comfort and energy efficiency of your home.
- There will be information available about the air quality inside your home, ensuring your indoor environment is healthy.
- Building managers will be able to provide recommendations on optimising the building operations and notify you about planned maintenance activities.
- Building managers will be able to access a list of indicators based on chosen parameters to help renovation planning by calculating different renovation scenarios to choose the best option for your home.

As CHRONICLE is a research and innovation project, not all benefits might be achieved. It is possible that, depending on the installed equipment, only some of the benefits might apply.
